Eco Revival Ireland Limited is a highly experienced general contracting company and specialist in Passive Fire Protection services .

We have competently carried out extensive projects throughout Ireland in various capacities to include: residential extensions, commercial buildings and Fire protection works to various high profile buildings nationally. Eco Revival Ireland Ltd are also approved contractors to the Health Services Executive.

Eco Revival Ireland Ltd is a full member of the ASFP and FIRAS and can provide third party certificates for all passive fire protection projects undertaken

Eco Revival is a private limited company and registered for VAT with full tax clearance.

Member No. 18974

Construction

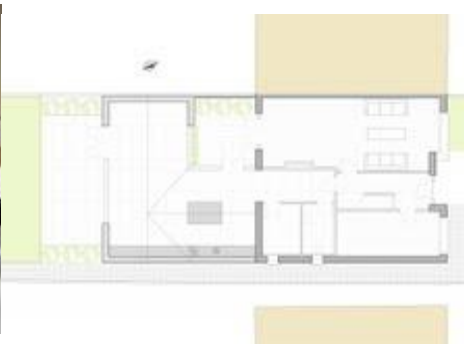

We have the facility to **design, manage and build** a variety of projects ranging from :

- domestic residential extensions to include BER energy ratings by a dedicated BER energy rating assessor

General Building services include:

- General block and brick work
- Plastering and skimming
- Plasterboard fixing
- Carpentry 1st and 2nd fixing
- Tiling
- Painting and decorating
- Deep cleaning
- Rubbish removal

Residential Extension: Terenure Kitchen and Living Room

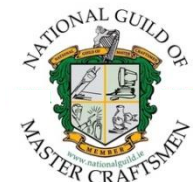

Eco Revival Ireland Limited

Registered in Ireland No: 480532

Registration Office Old Killybegs Road, Clane, Co. Kildare

Residential Extension:
Blackrock complete
refurbishment

Member No. 18974

- large complex commercial entities such as:

- residential apartment complexes

- commercial care facility

Six storey 30 bed respite centre: Distillery Road, Dublin 3

This project involved taking a derelict former distillery building and converting it into a 30 bed state of the art respite centre.
The complex nature of the works involved forming a new building within the existing structure and converting the façade
To blend in with the existing surroundings.

Eight unit new build:
Kelly's Row, Dublin 1

- Medical rooms and clean rooms

Siemens chose to work with us on the re-development of a few large **X-ray** and **MRI rooms** across Ireland in preparation for new equipment

Responsibilities include:

- strip out existing rooms
- lead lining and refurbishment works to leave a clean sterile room ready for fit out by client

Hospital project locations: Cork Regional, Limerick Regional, Beaumont (Dublin), Croom, Crumlin Children's and the Holles Street National Maternity hospital

Challenges met include negotiating successful delivery and working within a busy hospital environment

Groundworks & Steel Fixing

Groundworks and steel fixing services include:

- site clearance (all types)
- foundations from domestic to commercial
- steel fixing for reinforced concrete structures
- drainage works
- storm water
- flood relief
- sewage and sewage treatment systems

We have constructed lift shafts up to 6 floors and carried out complex steel fixing and concrete pours

Utilities

Eco Revival handles nearly all types of repairs, maintenance and upgrades as well as completing them in a timely and affordable way.

Key areas worked on include:

- *Telecommunication cable & fibre networks*
- *Street lighting*
- *Sewer lines*
- *Access chamber build and repair works*
- *Flood relief works*

- **Underground network construction:**

We have years of experience in telecoms infrastructural rollout services having worked closely with some of Ireland's largest providers.

- **Reinstatement** range of works include:

- Asphalt
- Block paving
- Kerbing
- Concrete paving

Passive Fire Protection Services is a trading name under Eco Revival Ireland Limited. We specialise in supplying and installing passive fire protection products to the building industry in Ireland.

Our core Passive Fire Protection business:

- Fire Stopping
- Fire Doors
- Fire Resistant Flooring
- Timber Protection
- Fire Partitions
- Intumescent Paint

Accreditors and Certifiers:

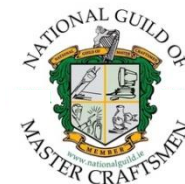

ASFP: Eco revival are affiliated with ASFP Ireland who were established in 1975 to represent the Fire Industry in relation to fire stopping and built in fire protection.

FIRAS: Eco revival are currently undergoing our accreditation with FIRAS, who provide third party certification to competent contractors and installers involved in the fire protection industry.

Eco Revival are only one of approximately 4 companies in Ireland which meet the requirements and standards required to be members of the FIRAS certification scheme to date.

Food for thought

Passive Fire Protection Services priority is protection of people and property. Even a good product, if poorly installed, will not provide the required performance.

Passive Fire Protection Services aim is to ensure that all domestic housing complies with current building requirements.

In addition to the current regulation requirements, Eco revival can provide additional passive fire protection measures to ensure that - in the unfortunate event of a fire - the building will allow its occupants more time to evacuate and also prolong the life of the building. This in turn will reduce the repair costs.

On 4th April 2013 the Minister for the Environment, Community and Local Government, Phil Hogan, TD announced strict new measures for the control of building projects. The Building Control Amendment Regulations 2013 sets out to prevent the future reoccurrence of poorly constructed dwellings and structures breaching building and fire regulations .

Eco Revival, through our Passive Fire Protection Services, sets itself apart from other building organisations by being at the forefront in this field through its accreditations with industry leaders and the National guild of master craftsmen to provide all our clients with the best service possible.

Food For Thought

It is not unlikely to assume that in the future all buildings along with their BER certificate will also require a compliant fire certificate with works carried out by accredited companies, should the building be sold or leased .

Health & Safety

EcoRevival is unconditionally committed to safe work practices and to work under Safety, Health and Welfare at Work (Construction) Regulations (S.I. No. 504 of 2006) and all subsequent amendments. Our safety philosophy is a top down effort that starts at our management level and goes down to all our staff and operatives and includes our subcontractors and suppliers.

Our construction management system incorporates clear, safe working practices at every planning stage and ensures the site execution follows the plan. We continuously train our staff and operatives with outside consultants to ensure that everyone has a full understanding of their responsibilities towards their fellow workers and themselves.

We also use outside consultants to audit our safety systems, records and practice on a regular basis in order to give feedback and ensure the quality of Eco Revival's safety program. On site we use construction planning, the induction system, continuous tool box talks and well analysed method statements to ensure that everyone stays aware and focused on safe work practices. Eco Revival's staff and workforce genuinely believe in ensuring a safe site and are totally committed to that goal.

Quality Assurance

Eco Revival is a member of National Guild of Master Craftsmen (*Membership number 15974*). As a contractor we ensure that our construction techniques, materials and products meet all required standards and client specifications for successful project execution.

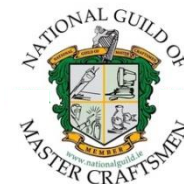

We are registered with the NSAI (National Standards Authority of Ireland) website in order to ensure that we are informed of all and any new and relevant standards as they become available.

Quality Assurance is also ensured through our staff and operative training programs.

Training

Eco Revival maintains an ongoing in-house training system in order to ensure that our staff and operatives have the on-site skills and knowhow to meet both quality and productivity standards.

Three recent examples of this training are our operatives learning how to read complex reinforced concrete structural and reinforcement drawings; the proper construction of Dublin Corporation Manholes; and operating a small excavator. We also bring in outside instructors, e.g. in the training of the safe use of dumpers, forklifts, cherry pickers and scissor lifts. And we send our staff outside the company, for example PRINCE2 Project Planning Certification.

Technical Development

Eco Revival is in a constant search for new products and more productive construction technology that can add value to our clients' projects. Areas where we have been successful are improved passive insulation and solar panels.

New areas that we are researching are water recycling and better site waste handling. We also have upgraded and intensified our use of software for better construction management and estimating; this now includes our use Symantec OnTarget Project Planning, Excel, PowerPoint, MicroSoft Access, Sage Accounts Package and Word.
